EFFECTIVELY TREAT VIRUSES, BACTERIA, FUNGI, AND ALGAE

When surfaces are coated with Microsure All Purpose Cleaner and Disinfectant, millions of nanoscopic crystalline structures form a molecular bond, effectively forming a new surface. The result is a "mechanical kill" of the cells of the bio threat trying to attach to the surface. This newly modified surface prevents adhesion, disrupting microbial communication and prohibits colonization, reproduction, and proliferation of viruses, bacteria, fungi and algae for an extensive period of time after Microsure is applied.
